

Cloud workflow automation for the Spot platform

Spot Connect is positioned to be the glue between Spot's product portfolio solutions, allowing users to create low-code workflows that combine automation with features and functionality across the entire platform.

The screenshot displays the Spot Connect workflow automation interface. It features a central workflow canvas with several steps: 'Get Elastigroup Details', 'Budget Threshold Notification', 'Approval To Scale Down Elastigroup', 'Scale Down Elastigroup', 'Scale Down Success Notification', and 'Close ServiceNow Incident'. A sidebar on the left lists various actions like 'Elastigroup', 'Ocean', 'AWS', 'Ansible Run Playbook', 'CloudFormation Run Template', 'Container', 'HTTP', 'JSONPath', 'Lambda', 'Python Execute', 'SSH Execute', 'Send Email', 'Slack Send Message', 'Control Structures', 'Approval', and 'Conditional'. A 'Run Workflow' button is visible at the top right of the canvas. Below the main workflow, there is a detailed view of an execution for 'Autoscaling on budgeted Elastigroup: 5.0'. This view includes a table of execution steps with their status and duration.

Step #	Step ID	Status	Duration
1	SNS Webhook Trigger	Success	2.032 seconds
2	Create ServiceNow Incident	Success	1.982 seconds
3	Get Elastigroup Details	Success	1.022 seconds
4	Budget Threshold Notification	Success	2.105 seconds
5	Approval To Scale Down Elastigroup	Success	10.324 seconds
6	Scale Down Elastigroup	Success	2.001 seconds
7	Scale Down Success Notification	Success	1.832 seconds
8	Close ServiceNow Incident	Success	1.903 seconds

Now available in alpha!

Growing list of pre-built integrations and visual workflow builder enables you to automate and orchestrate workflows with ease.

Current support for **Elastigroup** and **Ocean**, with more coming soon.

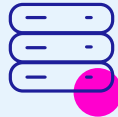

Flexible and powerful workflow builder

Create complex workflows in minutes, not hours. Build workflows visually with drag and drop functionality to automate those use cases you need the most.

Faster time to value with low-code automation

Process that typically took hours to days to complete can be reduced to minutes, thus significantly increasing time to value.

25+ Integrations to superpower your workflows

Leverage the growing list of integrations to enhance your workflows with third-party triggers as well as build-in action nodes.

Fewer mistakes with reusable workflows

Hours of menial, repetitive work increases the likelihood of error while automated workflows function deterministically and consistently.
